### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: claims 1, 2, 4-6, 8-17, 19, and 20 are allowed as the prior art does not teach or suggest the applicant's invention. The amended claim language and the applicant's remarks in response to the Office Action (mailed on 02/19/2009) distinguish the application's invention over the references that accompanied the Office Action. Regarding claim 1, the distinguishing elements of the claim teaches a structure comprising a first area including a plurality of pores arranged in a lattice structure that is one of (a) a hexagonal lattice, (b) a rectangular lattice, and (c) a graphite-shaped lattice, and a second area including a plurality of pores arranged in a lattice structure that is a different one of (a), (b), and (c), wherein the first area and the second area share a plurality of pores at a boundary of the lattice structure of the first area and the lattice structure of the second area, and wherein the first area's pore interval is the same as the second area's pore interval. Regarding claim 2, the distinguishing elements of the claim teaches, a structure comprising periodic array structures of pores formed in an anodized oxide film, wherein a plurality of types of periodic array structures are arranged adjacent to one another including (i) a first structure that is one of (a) a hexagonal lattice, (b) a rectangular lattice, and (c) a graphite-shaped lattice, and (ii) a second structure that is a different one of (a), (b), and (c), wherein the first structure and the second structure have pores in common on a boundary therebetween, and wherein in an area occupied by the first structure and in an area occupied by the second structure, the pore interval is the same. Regarding claim 14, the distinguishing elements of the claim teaches a magnetic

Art Unit: 2627

recording medium comprising a data area where pores filled with said magnetic material to record information; and a servo area where track positions are detected, wherein said data area comprises pores arranged in a structure that is one of (a) a hexagonal lattice, (b) a rectangular lattice, and (c) a graphite-shaped lattice, wherein said servo area comprises pores arranged in a structure that is a different one of (a), (b), and (c), wherein said data area's structure and said servo area's structure have pores in common at a boundary therebetween, and wherein said data area's pore interval is the same as said servo area's pore interval. Regarding claim 17, the distinguishing elements of the claim teaches a method of manufacturing a structure in which a plurality of pore periodic array structures formed in an anodized oxide film having different periods are arranged adjacent to one another, said method comprising: (1) a step of forming pore starting points made up of a plurality of types of periodic arrays on the surface of a substrate comprised of aluminum as a principal component; and (2) a step of anodizing said substrate's pore starting points simultaneously at the same anodization voltage: wherein the plurality of pore periodic array structures comprise (i) a first structure that is one of (a) a hexagonal lattice, (b) a rectangular lattice, and (c) a graphite-shaped lattice, and (ii) a second structure that is a different one of (a), (b), and (c), wherein the first structure and the second structure have pores in common on a boundary therebetween, and wherein in an area occupied by the first structure and in an area occupied by the second structure, the pore interval is the same.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
